PREFACE

Speaking of the elective system in our secondary schools, a prominent teacher recently said: "In the matter of citizenship, there can be no liberty of choice. All young people must be trained to be good citizens and the school must prescribe the subjects. As most of our political problems rest upon a basis—ethical, economic, or sociological, all students should be required to study Ethics, Economics, and Sociology."

Social Problems: Outlines and References offers to high school seniors a course which presents some of the ethical and sociological implications that underlie our civic and economic activities. The course aims to widen the student's societary outlook, to enlarge his reading horizon, to suggest standards by which social values may be measured, and to inspire him with a spirit of community idealism.

PART ONE. OUTLINES

The outlines here given may be used as Lecture Notes by teachers in High Schools, Normal Schools, and Junior Colleges. They are, however, as valuable to students as to teachers—saving the drudgery of daily note taking. Students may be required to write up a lecture in full, following the order of the lecture notes. Or students may be assigned a topic to develop and present to the class, the outlines and references serving as a guide to what is worth while. Or, again, the outlines may be used for study and review.

This method constitutes a breaking away from the textbook method in favor of Lecture, Library, and Life. In Chapters I and II, the student acquires a social vocabulary—chiefly biological in Chapter I, historical and psychological in Chapter II—which he uses thereafter in discussing definite problems. This social vocabulary avoids two dangers, namely: the presenting of Social Problems in the vocabulary of a debating student without any academic flavor and the other extreme of being too scientific in phraseology for a one-term high school subject.
I. ADJUSTMENT

Adjustment in the Animal World.

Protective: Coloring — Fur — Feathers.
Aggressive: Claws — Horns — Tusks.

Adjustment by Man. Scope.

Natural World: Resources — Forces.

PART TWO. REFERENCES

The following references are arranged in the alphabetic form used in library catalogues, with numerous cross references, thus simplifying the task of incorporating new topics and references.

They permit a wide variety of choice in general reading, either according to the teacher's assignment or the pupil's taste. Students may use them for debates and graduating essays as well as for Social Problems.

Some topics will be omitted in some schools and freely taught in others. The references on "Country" will be expanded by the teacher in a country high school and also by the Normal School teacher preparing teachers for country schools.
